

Universal Surface Treater

A universal platform, tailored for you

Our Universal Surface Treaters let you have the best of all available surface treatment equipment configurations, allowing for maximum power and flexibility for all surface treatment applications. The Pillar team will work with you to customize your surface treater for your required applications. We'll begin by determining your line speed, treat width, and what film type you'll be using. Next, we'll determine the watt density, and from there your power level.

Once we have this information, we can help you understand the right types of ground rolls and coverings to use, as well as what type and how many electrodes are needed. From here, our engineers will work with you to determine any other options or customizations needed to get your system exactly where it needs to be for your facility and production line.

Pillar Technologies' Universal Surface Treaters deliver reliable, powerful, and adaptable surface treatment for a wide variety of applications. With the help of our team and facilities, we can guarantee your Universal Surface Treater will be optimized to meet your needs.

Film Extrusion	The universal series is widely used to treat cast extrusion films
Adhesive Coatings	Pillar universal treaters provide the power and design to accurately treat before adhesive coating
Laminating and Printing	Converters rely on Universal treaters each day to build multi-layer flexible packaging structures

Trust a manufacturer with 50+ years of experience developing and manufacturing the most advanced surface treaters and induction sealers. Trust Pillar Technologies.
