

## High-Quality Surface Treatment Solutions

### Power Supplies for Corona Treaters

Along with an array of corona surface treaters, Pillar Technologies also manufactures power supplies for surface treaters. Pillar's power supplies are user-friendly, precise, and compact to allow for versatile implementation.

### Universal Surface Treater

Converters can now have the best of all available surface treatment equipment configurations by implementing the Pillar Universal station. This treater features a patented design of easily interchangeable magazines and ground rolls to allow operation as a bare roll (conductive substrates); covered roll (non-conductive substrates); or dual-dielectric (delicate substrates) system.

### Blown Film Surface Treater

Our Split Box™ Blown Film Station is an economical and easy-to-use cast and blown film extrusion system designed with operators in mind. It's easy to install and quick to start up, with an easy-thread, "drop through" split box design so operators can thread the web through the station in seconds.

### Narrow Web Surface Treater

Pillar's patented technology in narrow web corona treating allows printers to produce high-quality print on various conductive or non-conductive substrates. The compact design of the VELOCITY™ system easily mounts to most equipment configurations.

### Ozone Destruct Systems

Pillar's Ozone Destruct System reduces the ozone (O<sub>3</sub>) that may be generated in many different manufacturing processes, and converts it to oxygen (O<sub>2</sub>). Pillar Ozone Destruct Systems are user-friendly, quick to install, and the unique design allows for easy filter changes.
