

# iFoiler+ Induction Sealer

*Higher Power for Higher Speed Lines*

The iFoiler+ is the ultimate induction sealing solution for high-volume food packagers, pharmaceutical and nutraceutical industries, and liquid chemical packagers. With a 4.75kW power supply, the iFoiler+ incorporates all the benefits and features of the flagship iFoiler - only with a larger power supply. For many high-volume manufacturers, a larger power supply is needed to ensure a quality seal on their products.

Designed with modularity in mind, the iFoiler+ features:

- Highly functional touch screen interface improving operator efficiency
- Ability to save sealing programs enabling fast SKU changeover
- Compatibility with sealer options such as conveyors, bottle stop detection, and more allowing your sealer to do more as you grow
- Multiple language accessibility
- Mounting to a durable mobile cart, enabling one sealer to serve multiple lines.
- IP65 ready for complete protection against wash-down processes

For many packagers switching applications can be a weekly, daily, or even hourly occurrence. Because of this, packagers require absolute flexibility and modularity within their operations.

The iFoiler+ induction sealer is designed with this in mind, featuring the capability to store 50 different applications which can be accessed with an easy touchscreen interface. This drastically reduces changeover time for sealing applications, improving efficiency and productivity.
